Total Thickness – 8.4mm

Pile Height – 4.5mm

Hot Metal Nut BS4790
(Low Radius)

Tested to BSEN1307

Colour Fastness Tested

BOULEVARD 2000

Boulevard 2000 is a functional, premium quality secondary barrier carpet, ideal for use in any area in a building subject to high levels of soiling e.g. receptions and corridors. In some situations where the environment allows, Boulevard 2000 can also be used as primary, stand alone matting in entrances and access points.

Available in eight colours, Boulevard 2000 has been manufactured from 100% polyamide with a special patterned design to give optimum soil disguising properties. The fine fibres are excellent at retaining water and small dirt particles and the overall design ensures the floor covering retains its aesthetic appearance.

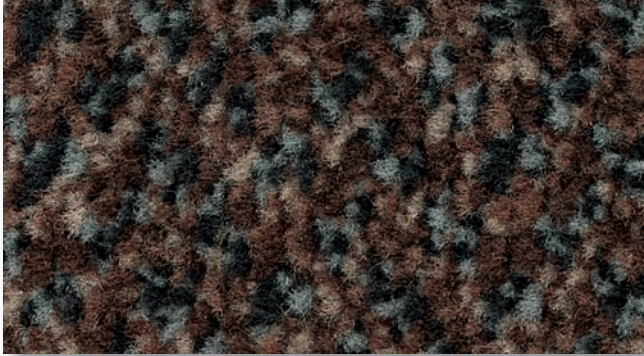

Boulevard 2000 is available in sheet form and incorporates an impervious PVC backing which provides an effective moisture barrier to the sub-floor and allows for effective wet cleaning.
