

JHS Carpeting is manufactured to the highest standards using the most technologically advanced fibres, manufacturing processes, colour, texture and design to suit all applications.

To ensure your carpeting retains a high level of appearance and performance, implement a Programme of Carpet Care as soon as possible after installation.

CARPET CARE IN 4 EASY STEPS

Carpet has the ability to conceal soilage and as a result can appear to be clean when it is not. By implementing the following preventative measures into your Cleaning Regime you will ensure that your carpeting retains its appearance, your investment is safeguarded and corporate image enhanced.

1. BARRIER MATTING

- With at least 80 % of soilage being foot borne, the positioning of appropriate barrier matting e.g. JHS Barrier Matting System at entranceways will prevent the ingress of dirt, grit and moisture in to your facility.
- Reduces soiling and wear.
- Ideal for use in lifts, where hard surfaces meet carpet and in crisis areas E.g. by vending machines.
- To function correctly it must be vacuumed regularly and cleaned periodically or it will act as a reservoir for soiling to adjacent areas.

2. DAILY CLEANING

EFFECTIVE VACUUMING

- A vital element in any Cleaning & Maintenance Regime. High usage areas should be vacuumed daily, using a commercial upright vacuum cleaner.
- Use of an upright twin motor vacuum cleaner agitates pile, removes dry soilage - dirt, dust and grit and enhances carpet appearance.
- Reduces fibre abrasion and wear.

SPOT REMOVAL

- Spots and spills typically account for approx 5–10 % of soiling, beverages and food spills are the most common culprits.
- Failure to remove unsightly marks on a regular basis will lead to a decline in overall appearance and increase the likelihood of permanent staining.
- For Best Results use the Approved Spotting Kit & Do Not Scrub.

3. PERIODIC CLEANING

Crisis Cleaning i.e. leaving a carpet to soil to the point where it appears dirty dingy and tired , before considering having it cleaned - is an outmoded concept and a false economy.

- With the use of professional operatives and the correct systems, carpets can be cleaned as frequently as soilage dictates, with no danger of damage or major disruption.
- Cost Effective - extends carpet life, prevents premature replacement.
- Improves Indoor Air Quality
- The frequency required will depend on carpet colour, type of installation, traffic flow & budget.

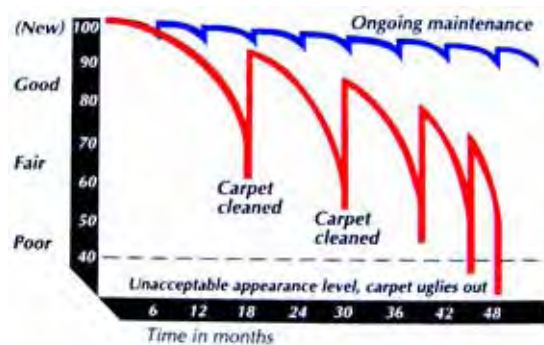

4. CARPET MAINTENANCE PROGRAMMES

A Carpet Maintenance Programme is the most cost effective way of managing your carpeting asset & appearance Beaver Floorcare Consultants, using specialised CAD software, can devise a Maintenance Schedule tailored to each clients facility and budget.— identifying priorities for vacuuming, spot removal and cleaning regularity.

The Programme can be implemented by the daily cleaning operation with advice from Beaver Consultants regarding equipment, monitoring, cleaning frequencies & barrier matting etc..Alternatively, Beaver Floorcare provide a full range of cleaning and maintenance services on a nationwide basis.

CARPET APPEARANCE LEVEL *Programmed v Unplanned*
