

## The Multi - Ply Planks - Walnut

The Walnut 21 mm engineered planks have the strength and substance of traditional solid wood flooring coupled with the board width and fitting versatility of an engineered floor. Available in sanded and matt lacquered finish.

Multi- Ply Engineered Floor Boards are made up of multiple layers that cross at 90 degrees, glued and pressed together. The 6 mm hardwood top layer is bonded to a 10 layered multi-ply backing which incorporates the tongue and groove system. This gives the board unrivalled stability allowing it to be installed as a floating floor on specialist underlays.

The 5-6 mm top layer can be sanded and resealed many times if needed. And the boards can be installed (fully bonded) over underfloor heating.

Plank size 189mm x 1830mm x 21mm
