WOODFLOORING

Quality Hardwood Flooring Responsibly Sourced

V4 Woodflooring

A family run business based in the South of England and now with a second hub in the Midlands, V4 Woodflooring specialises in providing quality hardwood flooring through a network of specialist approved retailers, who are able to offer independent advice and expert installation service so that your floor should last a lifetime.

What are V4 doing for the environment?

As a leading brand of hardwood flooring within the UK, V4 Woodflooring are committed to sustainability and always looking for new ways to lessen the impact the flooring industry has on the environment.

Less is More

V4 has taken the bold decision to remove solid hardwood planks from the Collection, replacing this range with more floors which have just a solid hardwood wear layer backed on engineered bases made from fast growing, spruce, poplar and birch wood. By doing this the yield from a single tree is increased by up to 60%, meaning less slow growing trees are used. This is key as the popularity of hardwood flooring increases worldwide and it is hoped that the rest of the industry follows this more sustainable path.

Re-forestation

It is a common misconception that hardwood flooring is a cause of deforestation. V4 hardwood is only sourced from well managed and sustainable purpose farmed forests. This means that only mature trees are selected for harvest. And for each one of these trees felled several more fast growing saplings are planted for the next generation.

Wood flooring is a choice for life

Unlike deforestation where the trees are burnt and the harmful carbon emissions let into the atmosphere, the trees harvested for wood flooring are processed and installed into homes therefore the carbon absorbed by the tree never escapes into the atmosphere. Once installed unlike many other products on the market there shouldn't be any necessity to change or renew. Wood flooring can be kept clean easily, and well maintained it will last a life time. Instead of being replaced a worn floor can be eventually refinished and rejuvenated.

Wood replaces carbon-hungry alternatives like plastic, metal ceramics and concretes, which require a large amount of energy during production. The production of wood is highly energy-efficient, giving wood products a lower carbon footprint.

Responsibly sourced timber

V4 is proud to be FSC® and PEFC® certified. All V4 Woodflooring products are produced in FSC® certified factories and comply fully with the European Timber Regulations. Look out for the logos on certified products.

V4 Quality Guaranteed

All V4 Woodflooring is covered for domestic use by a 35 year guarantee. Visit www.v4woodflooring.co.uk for full details.

Quality hardwood flooring responsibly sourced.

-  Floated installation on underlay
-  Direct fixed with secret nails
-  Direct fixed with adhesive
-  Micro-bevelled on 4 sides
-  Tongue & groove fitting
-  Lock system fitting

THE NATURAL WAY TO CLEAN AND PROTECT YOUR V4 WOODFLOORING

The V4 Collection includes over 60 hardwood floors which are sealed and protected with lacquer or various oil finishes from **Wood's Good®**.

Each finish enhances as well as protects the hardwood surface and each has a different aesthetic appeal.

It is important that the lacquered and oil finishes are cleaned and maintained correctly and with **Wood's Good** this is made simple. Cleaning kits for lacquered and oiled floors contain specialised soap and applicator mops.

Wood's Good Lacquer Soap
For lacquered floors simply use **Wood's Good Lacquer floor Soap** which will clean and revive lacquered floors as well as vinyl and laminate surfaces.

Wood's Good Natural Soap
For oiled and waxed finishes we recommend **Wood's Good Natural Floor Soap**. Made from natural plant oils it cleans and conditions any oiled or waxed surface.

CHOOSING A FINISH FOR YOUR FLOOR

Make sure you choose a finish which suits your lifestyle, for more advice on Wood's Good care and maintenance visit v4woodflooring.co.uk or speak to your local V4 Approved Retailer.

UV LACQUER

The top layer is spray coated with multiple coats of primer and then two coats of durable UV cured lacquer.

Finish: A smooth hard wearing and low maintenance surface which enhances the natural grain and beauty of the wood.

Usage: Ideal for kitchens and dining rooms where there is high risk of food and drink spills.

Care: Use **Wood's Good Lacquer Soap for regular cleaning**. Avoid scratches by minimizing surface dust and grit, use felt pads to protect from furniture. Wipe up any spillages quickly.

Maintenance: After long term use can be sanded and resealed with lacquer.

NATURAL OIL

Up to four coats of Danish oil are applied and machine buffed into the top layer, impregnating the surface.

Finish: The most natural finish of any, creating a deep lustre whilst maintaining the tactile surface of the wood.

Usage: Perfect for living rooms and bedrooms.

Care: Use **Wood's Good Natural Soap for regular cleaning**. Avoid scratches by minimizing surface dust and grit, use felt pads to protect from furniture. Wipe up any spillages quickly.

Maintenance: Initial application of maintenance oil after installation with periodic application of maintenance oil thereafter which will depend on usage.

UV OIL

Up to four coats of Danish oil are buffed into the top layer and cured under UV light.

Finish: A satin sheen is added to the oiled surface of the wood.

Usage: Perfect for living rooms and bedrooms. In kitchens and dining rooms extra maintenance is recommended.

Care: Use **Wood's Good Natural Soap or Active Care for regular cleaning**. Avoid scratches by minimizing surface dust and grit, use felt pads to protect from furniture. Wipe up any spillages quickly.

Maintenance: Initial application of Wood's Good Active Care after installation with periodic application thereafter which will depend on usage. [Find out more about Active Care at v4woodflooring.co.uk](http://v4woodflooring.co.uk)

HARDWAX OIL

Up to three coats of hardwax oil are buffed into the top layer. The high solid oil oxidises to form a wax surface.

Finish: A rich, smooth & durable surface.

Usage: Perfect for living rooms and bedrooms. In kitchens and dining rooms extra maintenance is recommended.

Care: Use **Wood's Good Natural Soap or Active Care for regular cleaning**. Avoid scratches by minimizing surface dust and grit, use felt pads to protect from furniture. Wipe up any spillages quickly.

Maintenance: Initial application of **Wood's Good Active Care** after installation with periodic application thereafter which will depend on usage.

CHOOSING THE GRADING OF YOUR FLOOR

V4 uses three different grades of timber, each has different characteristics.

AB Select/Nature Grade

Planks are selected to give grain and colour variation. There can be a small amount of light sapwood around the edge of the board. Small sound knots and smaller filled knots also add to the natural effect.

ABC Mixed Grade

Popular in species such as walnut. This grade displays more variation in grain and colour with larger sound & filled knots with more sapwood well distributed. Small filled cracks and dark streaks are also apparent.

CD Rustic Grade

More economical timber selection allows for more grain and colour variation with large sound knots and more filled knots well distributed. Small filled cracks and dark streaks are also apparent.

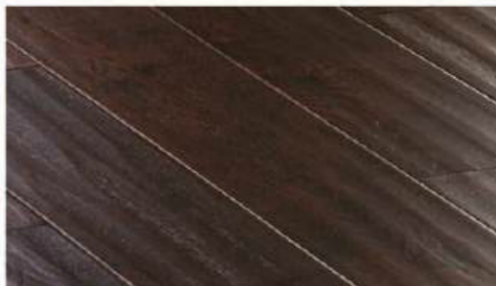

CHOOSING THE SURFACE OF YOUR FLOOR

The right surface finish can add character to any interior.

Brushed

A steel brush removes the soft grain from the surface layer creating a textured surface which enhances the beauty of the natural grain.

Hand Scraped

This process can only be done by hand using traditional tools to scrape out the soft grain following the natural contour of the wood. The result is a gentle undulating smooth surface.

Distressed

Various methods are used to give the wood an aged well used appearance also that of a board milled using rudimentary rustic tools. The skill is in making the distressing look natural.

Stained

Stain is applied by rollers and buffed in to penetrate the top surface of the board and then sealed with either oil or lacquer creating some stand out floors.

Smoked

Timber is stored in drying rooms filled with ammonia vapour or "smoke" to darken the timber. This means that the floor keeps its rich colour even after refinishing.

Cross Sawn

Random saw marks are made across the grain to add an extra texture to the surface.

DECO COLLECTION

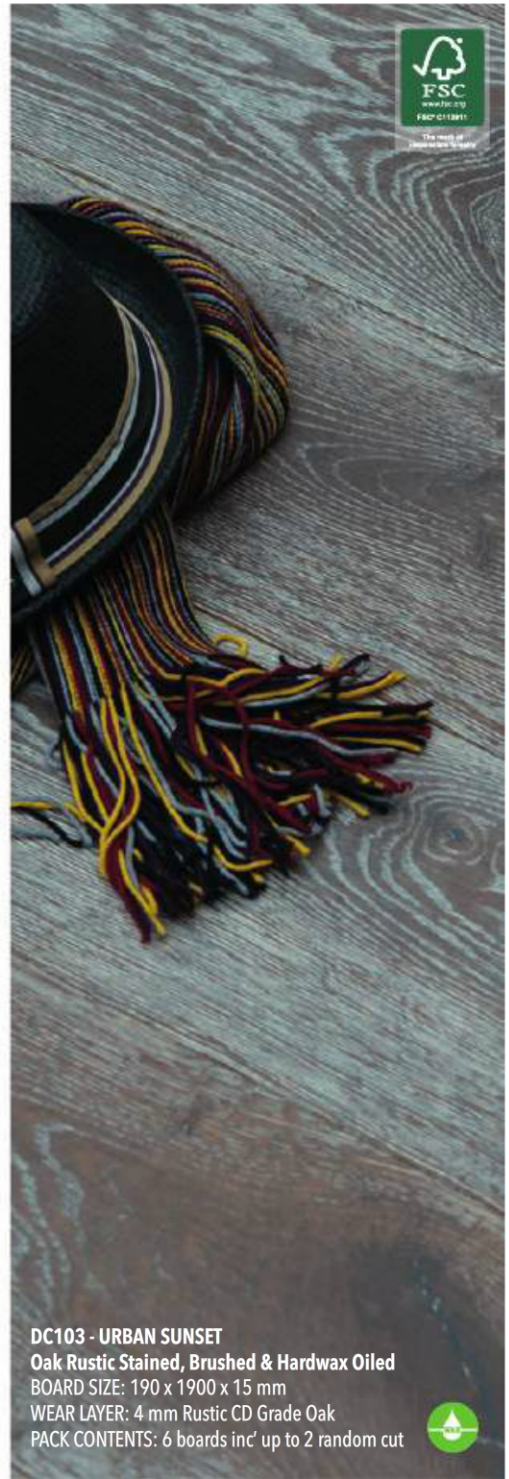

A contemporary collection engineered oak floors, coloured using traditional techniques

DC101 - FROZEN UMBER
Oak Rustic Stained, Brushed & Hardwax Oiled
BOARD SIZE: 190 x 1900 x 15 mm
