

How to clean a faux carpet: Polypropylene, Polyester & rPET

Being made from synthetic materials, spot and spills on Faux carpets, rugs and runners are relatively easy problems to solve. WoolSafe, our cleaning partner, has a separate process when it comes to cleaning products for synthetic floor coverings called CleanSeal.

Here are some general tips when it comes to spots and spills on Faux carpets,

- As a first step, do not panic, but act quickly as the removal of fresh spots is always much more successful than of old stains.
- Decide whether you can tackle the removal yourself (with the help of this guide). In case of extensive or old, set-in stains, contact your nearest CleanSeal Approved Service Provider.
- Always take up as much of the soil/stain as possible before applying any CleanSeal Approved spot remover. [Click here to shop a selection of CleanSeal Approved cleaning products.](#)
- Before applying any spotting agent, pre-test it on an inconspicuous area of the carpet.
- Always apply the spotting agent on a cloth, not directly on the stain. Wear rubber gloves.
- Never use washing up liquid or other cleaning agents not intended for carpet as they leave sticky residues and cause rapid soiling.
- Use small quantities of spot remover at a time, repeat if necessary. 2 or 3 light applications are more effective than 1 drastic application. Do not over wet the carpet.
- Always work from the edge of the stain towards the middle to avoid spreading it. Blot, never rub.
- Use solvents with care and ensure good ventilation.
- Always thoroughly rinse out water-based spotters with clean water.
