Wood Flooring – Important Notice

Boen reserve the right to supply 2 boards with slotted top layer in each pack. This could result in planked products having a staved appearance.

Sampling: Each piece of wood is unique in grain and colour and therefore cannot be truly representative of a finished installation. A small sample may not show a knot or sapwood but may be part of the accepted grading of that product. Please ensure that your client is aware of this before installation. Manufacturers grading sheets are available upon request.

Please Note: We operate a no returns policy on all wood and laminate flooring

SIMPLE INSTALLATION

REQUIREMENTS

- A. Synthetic grass
- B. Synthetic grass adhesive (1)
- C. Seam tape (2)
- D. About 20 kg quartz sand (scatter material) per m²
- E. A board or a wooden beam

Tools:

- Carpet knife (3),
- Adhesive comb (4),
- Hard broom and rake.

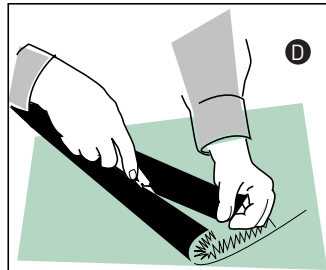

Checking the subsoil

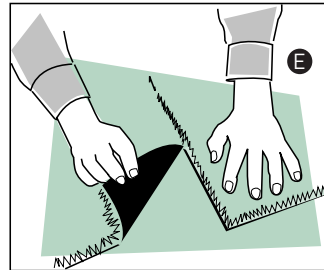

- A. Check if all surfaces to be covered with synthetic grass are sufficiently flat and also stable.
- B. Be sure that all possible necessary improvements to the subsoil have been executed.

Installation of the synthetic grass

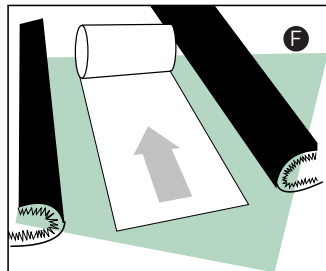

- A. Roll out the first synthetic grass strip, put it right and then mark where the other strips have to be put.
- B. Check the desired width of the rolls.
- C. Roll out the following strip next to the previous one and then determine the place for the following rolls.
- D. Make the seam between 2 rolls with a carpet knife (figure D).
- E. Prepare the adhesion of the seams with synthetic grass adhesive and the seam tape. The width of the seams between the 2 rolls cannot be more than about 4 mm (figure E).
- F. Unfold the sides of both rolls, so there is an opening of about 60 - 75 cm width (figure F).
- G. Now the first lanes are ready for adhesion. Put the adhesive on the seam tape and spread the adhesive equally with an adhesive comb. The quantity of the adhesive is determined by the teeth in the adhesive comb, but has to be about 3 mm thick and 15 - 20 cm wide (figure G).
- H. Carefully press the back of the synthetic grass with your hands in the adhesive. Check if the back of the synthetic grass has been pressed really well in the adhesive. Pressing or lightly rolling afterwards guarantees a good stitching (figure H).
- I. Repeat steps C up to H inclusive until your synthetic grass surface has been put completely.
- J. If all the synthetic grass has been put completely, check all seams once more and put some more adhesive where necessary.
- K. Cut the outline of the synthetic grass in the desired form.
- L. Remove all rest material with a rake or a broom.
- M. The artificial grass products Home, Diplomat and President have to be attached to the subsoil on the sides preferably by means of a board or a wooden beam (figure M).

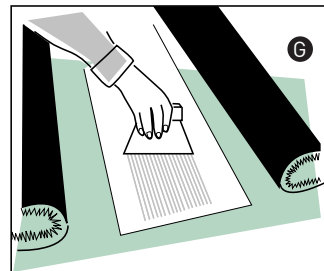

D Cut the sides of the synthetic grass

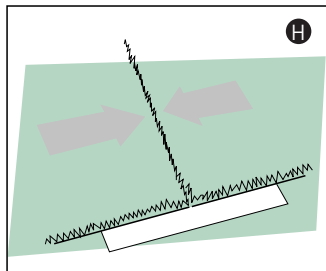

E The width of the seams can be max. 4 mm

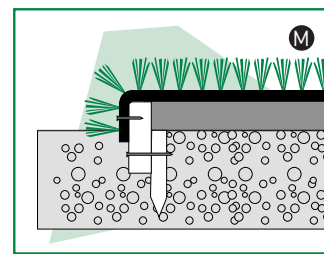

F Rollout the seam tape

G Put the right quantity of adhesive

H Press the synthetic grass in the adhesive

M Attach the board or beam to wooden piles and attach the synthetic grass to the board

Account No.
